# Nutritionist Pro™ Network Application 1325 or 1324 Error

1. This error is seen during the client install part of Nutritionist Pro™ Network application.
2. Error 1325 is usually seen when some folders are not in the location that the install expects them to be. On your network server you probably have 2 types of redirection for folders – User roaming profile or manual redirection which bypasses the roaming profile. Please change the manual redirection so it installs correctly
3. Go to my documents > right click > Properties > Location Tab > Copy redirect address > paste on a note pad (to make sure that you can redirect it again after installing the program) > Delete the location > Click Find Target > change it to Local Machine “My Document”.
4. After installing the machine copy and paste the redirect folder on the location the restore old set up.
